Design tokens v1.2

Dark theme taken exactly from the Platform admin shell, plus the light theme, brand palettes, website extensions, type, spacing, radius, shadow, motion and layout. Prepared for Myles (Jonathan Ayany).

1. How the themes are applied

SURFACE	LIGHT	DARK
Platform shell (platform admin)	Blue primary #1565C0, navy chrome #1A395B	Primary #6FA2F3 on #0B111C
School panels (admin, teacher, parent)	Tenant green primary #2E7D32, chrome #1B5E20	Tenant green #399B3E
Marketing website	Brand green #276B61 on #F1F6F4	Shell dark theme (navy), exactly as in section 2

The dark theme is now one palette across the shell and the website. Three values were corrected to match the shell and your screenshots exactly: dark background **#0B111C** (was #0F1623), light page background **#F4F4F5** (was #FAFAFA) and light muted **#F1F1F2** (was #F5F5F5). Everything else in the platform light and dark palettes is unchanged from the shell.

2. Dark theme: semantic tokens (exact)

Dark-mode component rules

Cards, chips, FAQ rows, the nav pill and dropdowns get a 1px #2B3A4F outline and no shadow. Icon tiles, tags and check marks use accent #263D5D with #BFDBFE text. Gold is #C79639 with #171717 text. Primary buttons are #6FA2F3 with #082A56 text. The logo watermark switches to the dark-theme mark at 7–10% opacity.

6. Typography
